

# NOIDs WEEKLY REPORT

## STATUTORY NOTIFICATIONS OF INFECTIOUS DISEASES

in ENGLAND and WALES

WEEK 2010/02

week ending 15/1/2010

### CONTENTS

- Table 1 Statutory notifications of infectious diseases in the past 6 weeks, with totals for the current year compared with corresponding periods of the two preceding years
- Table 2 Statutory notifications of infectious diseases for WEEK 2010/02 by HPA Region, county, local and unitary authority
- Table 3 **Weekly Analysis Report of Notifications above Expected Rates** (WARNER Report) for WEEK 2010/02

Doctors in England and Wales have a statutory duty to notify a 'Proper Officer' of the local authority, often the CCDC (Consultant in Communicable Disease Control), of suspected cases of certain infectious diseases:

Acute encephalitis	Meningitis	Smallpox
Acute poliomyelitis	Meningococcal septicaemia	Tetanus
Anthrax	Mumps	Tuberculosis
Cholera	Ophthalmia neonatorum	Typhoid fever
Diphtheria	Paratyphoid fever	Typhus fever
Dysentery	Plague	Viral haemorrhagic fever
Food poisoning	Rabies	Viral hepatitis
Leptospirosis	Relapsing fever	Whooping cough
Malaria	Rubella	Yellow fever
Measles	Scarlet fever	

Notifications of infectious diseases, some of which are later microbiologically confirmed, prompt local investigation and action to control the diseases. Proper officers are required every week to inform the HPA (formerly the Registrar General) anonymised details of each case of each disease that has been notified. The HPA has responsibility for collating the weekly returns from proper officers, and publishing analyses of local and national trends.

**Published on the WEB by the HPA Centre for Infections IM&T Dept**

All weekly data are Provisional

\* excluding chemoprophylaxis

Note: This table shows those districts from which the rates of notifications reported this week were significantly higher than expected. The number of notifications in each district is shown in the 'Observed number' column. The number expected if the national rate is applied to the district population is in the 'Expected number' column. The 'Ratio observed/expected' column shows by how many times the observed number of exceeds the expected number. Caution must be exercised when interpreting this table, as the listing is wholly dependent on comparable reporting of notifiable infectious diseases from all districts of England and Wales and on local patterns of disease.
