

# Summary of Results

## External Quality Assessment for Food Microbiology

### *Staphylococcus aureus* enterotoxin Scheme

**Distribution Number:** STA011

**Sample Numbers:** ST0021, ST0022

Distribution Date:	<b>November 2007</b>
Results Due:	<b>30 November 2007</b>
Report Date:	<b>12 December 2007</b>
Data analysed by:	<b>Heena Shah Nicola L. Lang</b>
Report compiled by:	<b>Heena Shah Nicola L. Lang Julie E. Russell</b>

This report must not be reproduced without permission of the organisers.

General Information	6

This Scheme provides external quality assessment (EQA) samples for laboratories that examine for *Staphylococcus aureus* enterotoxin in food samples. Staphylococcal food poisoning is an intoxication due to consumption of food or beverages containing pre-formed enterotoxins (SE). *S.aureus* is known to produce at least 14 different SEs (Leloir, Y., Baron, F. and Gautier, M. (2003) *Staphylococcus aureus* and food poisoning. *Genet. Mol. Res.* 2, 63 – 76).

The samples are prepared in collaboration with staff of the Food-borne Pathogens Reference Unit, Food Safety Microbiology Laboratory, Centre for Infections, Colindale. Strains were tested using the reverse passive latex agglutination (RPLA) and a modification of a PCR-based technique. (McLauchlin, J., Narayanan G.L., Mithani, V. and O'Neill, G. (2000) The detection of enterotoxins and toxic shock syndrome genes in *Staphylococcus aureus* by polymerase chain reaction. *J. Food Protect.* 63, 479 - 488). Copies of this publication are available to participants on request.

All participants are reminded that incorrect results for detection of *S.aureus* enterotoxin isolated from food samples could have serious public health implications.

If you experienced problems with the test please refer to the 'Troubleshooting Section' on page 5 and request a repeat sample.

Scores are not allocated for results reported for the *S.aureus* enterotoxin Scheme. Comments relating to performance are included in Table 1 on pages 3 - 4.

If you require further information on the scheme, samples or quality control please refer to the 'General Information Section' on page 6, contact details of FEPTU staff for advice and information are on page 5.

Information about other Health Protection Agency functions and services is available from the web-site [www.hpa.org.uk](http://www.hpa.org.uk)

## Sample: ST0021 and ST0022

### Contents:

*Staphylococcus aureus* (10<sup>4</sup>)

The level is presented as colony forming units (cfu) per ml reconstituted sample

### Expected Results:

Examination	Expected Result	Your Result
<i>S.aureus</i> enterotoxin	<i>S.aureus</i> enterotoxin present (Group B)	

### Comments on Performance on sample ST0021:

Results are summarised in Table 1 (page 3 - 4).

	ST0021	ST0022
Total participants reporting for <i>S.aureus</i> enterotoxin (SET)	28	28
Total participants reporting correctly the <b>presence</b> of SET	27 (96%)	27 (96%)
Participants identifying correctly the <b>presence</b> of SET group B	13	13
Participants not reporting specific SET group	14	14
<b>Total sent sample</b>	<b>32</b>	<b>32</b>
<b>Non-returns</b>	<b>1</b>	<b>1</b>
<b>Not examined</b>	<b>3</b>	<b>3</b>

#### Sample-specific comment:

ST0021 and ST0022 were from the same batch.

**Table 1** - Participants' results for samples ST0021 and ST0022  
(NE – not examined, NR – not returned)

Lab Number	ST0021	ST0022	Method used	Comment
18	Detected	Detected	TECRA	ST0021 - Satisfactory result ST0022 - Satisfactory result
20	NE	NE		Samples not examined
126	Present (Group B)	Present (Group B)	Not stated	ST0021 - Satisfactory result ST0022 - Satisfactory result
175	Present (Group B)	Present (Group B)	RPLA	ST0021 - Satisfactory result ST0022 - Satisfactory result

713	NE	NE		Samples not examined
722	Not detected	Not detected	VIDAS	ST0021 - Unsatisfactory result ST0022 - Unsatisfactory result
748	Detected	Detected	MiniVIDAS	ST0021 - Satisfactory result ST0022 - Satisfactory result
777	Present	Present	VIDAS	ST0021 - Satisfactory result ST0022 - Satisfactory result

## Troubleshooting

### Checklist for Quality:

- 1. Methods**  
*Are you using a standard or validated, clearly documented method?*
- 2. Culture Media**  
*Are your culture media allowing optimal isolation of the target micro-organisms? Do you have sufficiently challenging quality control procedures for your culture media?*
- 3. Equipment**  
*Is all the equipment used for the procedures (incubators, refrigerators, measuring instruments, spiral platers etc.) calibrated and monitored regularly?*
- 4. Staff Training**  
*Are the staff who perform the examinations fully trained and familiar with all the procedural steps?*
- 5. Internal Quality Control (IQC)**  
*Do you have adequate IQC procedures in place with documented guidelines for dealing with IQC failures?*
- 6. Good Laboratory Practice (GLP)**  
*Do staff adhere to GLP at all times?*  
*If cross-contamination has occurred with EQA samples it can also occur with routine food samples.*
- 7. Clerical Procedures**  
*Are your laboratory numbering and clerical procedures adequate?*  
*If you have reported EQA results incorrectly this may also happen with routine food samples.*

### Repeat Samples:

Participants should, where possible, determine the reason(s) for incorrect results and request repeat samples to ensure the cause has been eradicated. Repeat samples are free of charge, provided they are dispatched with the next distribution of samples; a handling fee will be charged for immediate dispatch.

### Help and Advice:

The Scheme Organisers will help participants to resolve issues relating to the microbial testing of food samples. Participants may also contact FEPTU to discuss any issues relating to the schemes in general, data analyses or performance assessments.

<b>Scheme Consultants</b>	Prof. Eric Bolton Dr. Jim Mclauchlin	

## General Information

**Scheme:** *S.aureus* enterotoxin

**Sample Type:** Freeze-dried culture of *S.aureus* in evacuated glass vials

**Safety Data Sheet:** Contact the organisers or [www.hpa.org.uk/srmd/services/foodeqa.htm](http://www.hpa.org.uk/srmd/services/foodeqa.htm)

**Examinations:** Detection of *S.aureus* enterotoxin

**FEPTU Quality Control:** Minimum of five vials, selected randomly from the batch are examined for the test parameters as indicated on the request/report forms, using a range of Health Protection Agency (HPA) methods which are based on ISO methods. Detection of the *S.aureus* toxin gene is by PCR.

**Commercial Kits:** RPLA kits are normally able to detect only SEA, SEB, SEC and SED from cultures grown *in vitro*. ELISA kits (TECRA, Ridascreen, VIDAS) are available to detect a limited range of enterotoxins (SEA, SEB, SEC, SED and SEE). However, SEG and SEH, and less commonly SEE and SEI, have been detected in the absence of SEA, SEB, SEC and SED and account for up to half of the incidents in England and Wales compatible with staphylococcal food poisoning. Recent studies in France also commonly found SEG, SEH, SEI and SEJ (Rosec, J.P. and Gigaud, O (2002) Staphylococcal enterotoxin genes of classical and new types detected by PCR in France. *Int. J. Food Microbiol.* 77, 61-70).

**Accreditation:** The HPA *Staphylococcus aureus* enterotoxin EQA Scheme is accredited by the United Kingdom Accreditation Service (UKAS) to ISO/IEC Guide 43-1:1997 through assessment against ILAC G13: 2000.
